Chapter 1

Module Index

1.1 Modules

Here is a list of all modules:

Pre initial values of PID regulators	9
Values updated during the callback of the odometry	10
Values updated during the callback of the odometry	11
Variables used for debugging purposes	12

Chapter 2

Namespace Index

2.1 Namespace List

Here is a list of all documented namespaces with brief descriptions:

config	13
debug	14
fsm	14
move_to_point	14
regulator	18

Chapter 3

Hierarchical Index

3.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

Enum	
fsm.FsmStates	21
fsm.FsmRobot	19
fsm.FsmState	20
regulator.Regulator	22

Chapter 4

Class Index

4.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

fsm.FsmRobot	19
fsm.FsmState	20
fsm.FsmStates	21
regulator.Regulator	22

Chapter 5

Module Documentation

5.1 Pre initial values of PID regulators

Values of PID parameters before the update from the dynamic reconfigure module. Advice is to keep current values.

Variables

- float **config.KP_ROT** = 0.0
- float **config.TI_ROT** = 0.000001
- float **config.TD_ROT** = 0.0
- float **config.INT_LIMIT_ROT** = 0.0
- float **config.P_ANG_DST** = 0.0
- float **config.P_ANG_THT** = 0.0
- float **config.KP_FWD** = 0.0
- float **config.TI_FWD** = 0.000001
- float **config.TD_FWD** = 0.0
- float **config.P_FWD_DST** = 0.0
- float **config.P_FWD_CUR** = 0.0
- float **config.INT_LIMIT_FWD** = 0.0

5.1.1 Detailed Description

Values of PID parameters before the update from the dynamic reconfigure module. Advice is to keep current values.

5.2 Values updated during the callback of the odometry

Variables

- float `move_to_point.xInitial` = 0.0
Initial x coordinate from the start of moving forward.
- float `move_to_point.yInitial` = 0.0
Initial y coordinate from the start of moving forward.

5.2.1 Detailed Description

5.3 Values updated during the callback of the odometry

These values are updated during [position_callback](#).

Variables

- [move_to_point.cur_pos](#) = Point()
Contains X and Y coordinates of the current position.
- [move_to_point.x](#)
- [move_to_point.y](#)
- float [move_to_point.theta](#) = 0.0
Contains current angle of the robot.

5.3.1 Detailed Description

These values are updated during [position_callback](#).

5.4 Variables used for debugging purposes

If debugging only rotation/forward, they receive the value from the dynamic reconfigure.

Variables

- float `move_to_point.GOAL_THETA` = 0.0
Goal angle.
- float `move_to_point.GOAL_DIST` = 0.0
Goal distance.

5.4.1 Detailed Description

If debugging only rotation/forward, they receive the value from the dynamic reconfigure.

Chapter 6

Namespace Documentation

6.1 config Namespace Reference

Variables

- float **controller_freq** = 50.0
- float **rot_speed_limit** = 2.0
- float **fwd_speed_limit** = 0.7
- float **angle_err_tolerance** = 0.04
- float **dist_err_tolerance** = 0.005
- float **KP_ROT** = 0.0
- float **TI_ROT** = 0.000001
- float **TD_ROT** = 0.0
- float **INT_LIMIT_ROT** = 0.0
- float **P_ANG_DST** = 0.0
- float **P_ANG_THT** = 0.0
- float **KP_FWD** = 0.0
- float **TI_FWD** = 0.000001
- float **TD_FWD** = 0.0
- float **P_FWD_DST** = 0.0
- float **P_FWD_CUR** = 0.0
- float **INT_LIMIT_FWD** = 0.0

6.1.1 Detailed Description

Static configuration of the `move_to_point` module

6.2 debug Namespace Reference

Variables

- `pub_dbg_angle_err` = `rospy.Publisher("debug/angle_err", Float32, queue_size = 5)`
- `pub_dbg_theta` = `rospy.Publisher("debug/theta", Float32, queue_size=5)`
- `pub_dbg_theta_filtr` = `rospy.Publisher("debug/theta_filtr", Float32, queue_size=5)`
- `pub_dbg_ang_to_goal` = `rospy.Publisher("debug/angle_to_goal", Float32, queue_size=5)`
- `pub_dbg_ang_to_goal_filtr` = `rospy.Publisher("debug/angle_to_goal_filtr", Float32, queue_size=5)`
- `pub_dbg_rot` = `rospy.Publisher("debug/rot_vel", Float32, queue_size=5)`
- `pub_dbg_distance` = `rospy.Publisher("/debug/distance", Float32, queue_size = 5)`
- `pub_dbg_distance_filtr` = `rospy.Publisher("/debug/dist_filtr", Float32, queue_size = 5)`
- `pub_dbg_dist_to_goal` = `rospy.Publisher("/debug/dist_to_goal", Float32, queue_size = 5)`
- `pub_dbg_dist_to_goal_filtr` = `rospy.Publisher("/debug/dist_to_goal_filtr", Float32, queue_size = 5)`
- `pub_dbg_fwd` = `rospy.Publisher("/debug/dist_velocity", Float32, queue_size = 5)`
- `pub_dbg_fwd_rot` = `rospy.Publisher("/debug/fwd_rot", Float32, queue_size = 5)`
- `pub_dbg_fwd_rot_vel` = `rospy.Publisher("/debug/fwd_rot_vel", Float32, queue_size = 5)`

6.2.1 Detailed Description

Contains debug variables and publisher/subscriber definitions

6.3 fsm Namespace Reference

Classes

- class [FsmRobot](#)
- class [FsmState](#)
- class [FsmStates](#)

6.3.1 Detailed Description

```
@package fsm
Finite State Machine library
```

6.4 move_to_point Namespace Reference

Functions

- def [angle_error_calc](#) (target_angle, current_angle)
Calculate rotation direction
Positive rotation direction - clockwise
Negative rotation direction - counter clockwise.
- def [dyn_reconf_callback](#) (config, level)
Dynamic reconfigure callback function.
- def [position_callback](#) (msg)
Odometry subscriber callback function.
- def [goal_position_callback](#) (msg)
Callback function for processing goal values.
- def [idle](#) ()
Idle function of the robot state machine.
- def [rotate](#) ()
Rotation function of the robot state machine.
- def [forward](#) ()
State machine functionality for moving forward.

Variables

- float **T** = 1.0 / controller_freq
Controller's period in seconds.
- float **xInitial** = 0.0
Initial x coordinate from the start of moving forward.
- float **yInitial** = 0.0
Initial y coordinate from the start of moving forward.
- **cur_pos** = Point()
Contains X and Y coordinates of the current position.
- **x**
- **y**
- float **theta** = 0.0
Contains current angle of the robot.
- **goal** = Point(0, 0, 0)
Goal input coordinates Updated in [goal_position_callback](#).
- float **GOAL_THETA** = 0.0
Goal angle.
- float **GOAL_DIST** = 0.0
Goal distance.
- **active_goal** = Point(0, 0, 0)
Goal coordinates that are under processing.
- float **angle_to_goal_filt** = 0.0
Filtered value of the goal angle.
- float **theta_filt** = 0.0
Filtered value of the current angle.
- bool **POSITIVE** = True
Constant for indicating positive angle.
- bool **NEGATIVE** = False
Constant for indicating negative angle.
- bool **theta_sign** = POSITIVE
Variable indicating signess of the current iteration angle: POSITIVE or NEGATIVE.
- bool **theta_sign_prev** = POSITIVE
Variable indicating signess of the angle from the previous iteration: POSITIVE or NEGATIVE.
- float **goal_distance** = 0.0
Calculated goal distance.
- float **goal_distance_filt** = 0.0
Filtered value of the goal distance.
- float **dist_filt** = 0.0
Filtered value of the desired distance.
- bool **move_fwd_started** = False
Indicates if moving forward started or not.
- float **angle_to_goal_fwd** = 0.0
Used for correcting angle error which accumulates while moving forward.
- **sub_goal_position** = rospy.Subscriber("/target_position/position", Pose2D, [goal_position_callback](#))
Goal destination subscriber.
- **sub_odom** = rospy.Subscriber("/m2xr_diff_drive_controller/odom", Odometry, [position_callback](#))
Odometry (current position) subscriber.
- **pub_cmd_vel** = rospy.Publisher("/m2xr_diff_drive_controller/cmd_vel", Twist, queue_size=1)
cmd_vel publisher Used to publish desired velocity to the next layer of the control.
- **r** = rospy.Rate(controller_freq)

- Initialization of the speed_controller node.*
- `StateIdle = FsmState(FsmStates.Idle, idle)`
FSM idle state definition.
- `StateRotation = FsmState(FsmStates.Rotating, rotate)`
FSM rotation state definition.
- `StateForward = FsmState(FsmStates.Forward, forward)`
FSM moving forward state definition.
- `list StatesList = [StateIdle, StateRotation, StateForward]`
List of permitted states.
- `robot_fsm = FsmRobot("M2XR", StatesList, StatesList[0])`
FSM Initialization.
- `srv_dyn_reconf = Server(DynRecPIDConfig, dyn_reconf_callback)`
Dynamic reconfigure server initialization.
- `rot_pid = Regulator(KP_ROT, TI_ROT, TD_ROT, T, rot_speed_limit, INT_LIMIT_ROT)`
Normal rotation PID regulator initialization.
- `fwd_pid = Regulator(KP_FWD, TI_FWD, TD_FWD, T, fwd_speed_limit, INT_LIMIT_FWD)`
Moving forward PID regulator initialization.
- `fwd_pid_rot = Regulator(KP_ROT, TI_ROT, TD_ROT, T, rot_speed_limit, INT_LIMIT_ROT)`
Rotation while moving forward PID regulator initialization.

6.4.1 Detailed Description

Implements differential drive robot control

6.4.2 Function Documentation

6.4.2.1 angle_error_calc()

```
def move_to_point.angle_error_calc (
    target_angle,
    current_angle )
```

Calculate rotation direction
Positive rotation direction - clockwise
Negative rotation direction - counter clockwise.

Parameters

<i>target_angle</i>	Angle to be reached [degrees]
<i>current_angle</i>	Current angle of the robot [degrees]

Returns

Error including direction [degrees]

6.4.2.2 dyn_reconf_callback()

```
def move_to_point.dyn_reconf_callback (
    config,
    level )
```

Dynamic reconfigure callback function.

Parameters

<i>config</i>	Contains all dynamic parameters
<i>level</i>	Not used

Returns

config

6.4.2.3 forward()

```
def move_to_point.forward ( )
```

State machine functionality for moving forward.

This state controls robot when moving forward. It filters current distance and desired distance values, calculates an error, and generates desired linear speed calculated in PID routine. Desired rotation speed is then published to the velocity publisher [pub_cmd_vel](#).

6.4.2.4 goal_position_callback()

```
def move_to_point.goal_position_callback (
    msg )
```

Callback function for processing goal values.

Parameters

<i>msg</i>	Message to be processed - contains desired goal position
------------	--

6.4.2.5 idle()

```
def move_to_point.idle ( )
```

Idle function of the robot state machine.

In this state robot is waiting for the new command to arrive.

6.4.2.6 position_callback()

```
def move_to_point.position_callback (
    msg )
```

Odometry subscriber callback function.

Parameters

<i>msg</i>	The message base on Odometry message type
------------	---

6.4.2.7 rotate()

```
def move_to_point.rotate ( )
```

Rotation function of the robot state machine.

This state controls robot rotation. It filters current angle and desired angle values, calculates an error in degrees and generates desired rotation speed calculated in PID routine. Desired rotation speed is then published to the velocity publisher [pub_cmd_vel](#).

6.5 regulator Namespace Reference

Classes

- class [Regulator](#)

6.5.1 Detailed Description

```
@package regulator
Implements PID regulation algorithms
```

Chapter 7

Class Documentation

7.1 fsm.FsmRobot Class Reference

Public Member Functions

- def `__init__` (self, name, states_list, state)
- def `switch_state` (self, new_state)
- def `validate_state` (self, state)
- def `default` (self)
- def `execute` (self)

Public Attributes

- `name`
- `states_list`
- `current_state`
- `previous_state`

7.1.1 Detailed Description

Finite State Machine class
Provides data structure for FSM as well as main
methods for normal functioning and events logging

7.1.2 Constructor & Destructor Documentation

7.1.2.1 `__init__()`

```
def fsm.FsmRobot.__init__ (
    self,
    name,
    states_list,
    state )
```

Default constructor for FSM
name: Name of the FSM
states_list: List of all available states
state: initial state

7.1.3 Member Function Documentation

7.1.3.1 `switch_state()`

```
def fsm.FsmRobot.switch_state (
    self,
    new_state )
```

Method used for switching between states of the FSM

The documentation for this class was generated from the following file:

- `/home/djordje/catkin_ws/src/ros_diff_drive/scripts/fsm.py`

7.2 `fsm.FsmState` Class Reference

Public Member Functions

- `def __init__ (self, state, method)`

Public Attributes

- `state`
- `method`

The documentation for this class was generated from the following file:

- `/home/djordje/catkin_ws/src/ros_diff_drive/scripts/fsm.py`

7.3 fsm.FsmStates Class Reference

Inheritance diagram for fsm.FsmStates:

Collaboration diagram for fsm.FsmStates:

Static Public Attributes

- int **Default** = 0
- int **Idle** = 1
- int **Rotating** = 2
- int **Forward** = 3

7.3.1 Detailed Description

FSM states enumeration

The documentation for this class was generated from the following file:

- /home/djordje/catkin_ws/src/ros_diff_drive/scripts/fsm.py

7.4 regulator.Regulator Class Reference

Public Member Functions

- `def __init__ (self, KP, TI, TD, T, u_limit, ui_limit)`
- `def update_params (self, KP, TI, TD, ui_limit)`
- `def pid_positional (self, error)`
- `def pid_incremental (self, error)`

Public Attributes

- `KP`
- `KI`
- `KD`
- `u_limit`
- `ui_limit`
- `err_prev`
- `err_p_prev`
- `u`
- `T`
- `KDT`
- `KIT`
- `Ui`
- `error_p_prev`

The documentation for this class was generated from the following file:

- `/home/djordje/catkin_ws/src/ros_diff_drive/scripts/regulator.py`
